Table 8. Effect of using critics on performance. For each method, reward and cost are shown with and without a critic; the worse-performing variant per method is coloured in grey.

Table 9. Selected baselines using both a fixed relaxed cost limit of 15 and annealing schedules (exponential decay from 50 to 0.1 and piecewise linear: first third episodes at 15, last third at 0.1, middle third decreasing linearly). Red: negative (safe) reward, italics: safety probability $< 50\%$, grey: Pareto-dominated pairs, bold: best value per metric (only among methods with positive (safe) reward and safety probability $\geq 50\%$ for the other metric).
